This book reflects contributions from experts in biological and health effects of radio frequency (RF), microwave electromagnetic fields (EMFs) and radiations (300 kHz–300 GHz). Diverse topics related to physics, biology, pathology, epidemiology, and plausible biophysical and biochemical mechanisms of microwave telecommunication EMFs, emitted by antennas, and devices are included. Discussions on the possible consequences of 5G MT EMFs based on available data and pertinent correlation between EMF exposure and viral diseases are also covered. It further illustrates Individual and public health protection and setting of biologically and epidemiologically based exposure limits.
